SUMMARY

Computational Data Sciences graduate with hands-on experience in warehouse and logistics operations, contract and database administration, and independent software development. Builds and maintains automated, production-grade data pipelines and web applications end-to-end, from data sourcing through deployment. Combines an operations background in international logistics and customs with practical skills in cloud infrastructure, backend automation, and applied AI.

SKILLS

Technical: Python, SQL, JavaScript/TypeScript, React, Vite, Node.js, GitHub Actions (CI/CD & cron automation), Supabase (PostgreSQL), Vercel, REST APIs, Anthropic/OpenAI API integration, data pipeline design, Excel/data analysis

Operations: Inventory management, warehouse workflow optimization, customs and trade documentation, contract administration, vendor and alliance coordination, quality control reporting

Languages: English (fluent), Korean (fluent)

WORK EXPERIENCE

Staff Intern — JCS Systems Inc., Georgia *Jun 2024 – Aug 2024*

- Collaborated with senior staff at the Hyundai Glovis warehouse to optimize operational workflows.
- Partnered with senior staff at the Hyundai Transys warehouse to enhance inventory management systems.
- Checked stock statuses and reported on day-to-day requirements while ensuring stock quality.
- Provided additional support during emergency situations, demonstrating commitment and teamwork.

General Manager, Database Manager — JNB Customs, South Korea *Sep 2023 – Jan 2024*

- Recorded and structured documents by order priority.
- Evaluated and reported on new project proposals, ensuring alignment with company objectives.
- Administered contracts with alliance partners, ensuring compliance with terms and objectives.

INDEPENDENT PROJECTS

usgridexplorer.com — U.S. Power Grid & Data Center Infrastructure Platform *2025 – Present*

- Built and operate a fully automated content and data platform tracking U.S. power grid capacity and data center development, monetized through display advertising.
- Designed an end-to-end automated publishing pipeline generating AI-written research briefings, sourced from RSS feeds, stored in Supabase, and served via Vercel serverless functions on a GitHub Actions schedule.
- Stack: React, Vite, Supabase (PostgreSQL), Vercel, GitHub Actions, Anthropic API.

CustomsMate KR — Korean Import/Export Regulation Search Platform *2025 – Present*

- Building a search platform for Korean customs brokers and import/export businesses that aggregates open data from the Korea Customs Service, MFDS, and Ministry of Government Legislation.
- Automated data ingestion via scheduled GitHub Actions jobs into Supabase, with AI-generated plain-Korean regulatory summaries surfaced through a React/Vite frontend.

Grid Permit Alerts — B2B Data Center Permit Tracking Service *2025 – Present*

- Developing a subscription alert service tracking data center development permit filings across Northern Virginia for commercial real estate brokers, vendor business development teams, and investors.
- Leverages usgridexplorer.com's existing audience as a built-in distribution and customer acquisition channel.

EDUCATION

George Mason University

Bachelor of Science, Computational Data Sciences

Minors: Business, Data Analysis
